CALIFORNIA GATE
& ENTRY SYSTEMS

Access Control | Visitor Management Software | Pay Parking | Parking Guidance | Fire Alarm
Fabrication | Automated Gates | CCTV& LPR | Audio-Visual | DAS | Structured Cabling

On-site Server Database

- The standard access control systems we offer, whether it's ICT, Kantech, or LiftMaster, each has its own version of an on-site server pre-loaded with software and contains the database for the access control system. This includes the resident list IDs, manager access IDs, vendors, security levels and schedules.
- The hardware platforms come pre-configured to support mobile apps and web-based or app-based remote user platforms (with variation depending on the system). The on-site server includes a customized dashboard for easy system management (adding/removing fobs, modifying schedules, and/or running reports, viewing live-reads).
- An on-site server is the clear choice if you need long-term flexibility and easy deployment of access control solutions. These servers are installed locally in a lockable (ventilated) enclosure or in another secure location on-site. A high-speed internet connection is required for real-time and remote management.

Remote Server Hosting for Access Control

- Server is located off-site in a secure and temperature-controlled location
- Server to be powered by battery backup with power conditioning
- Includes daily data backup
- Access control software updates are automatically done by our company
- Server hosting removes the possibility of on-site damage corrupting the database
- We cover server maintenance / replacement parts cost

CG Systems Inc. will provide an off-site enterprise level access control server option for your community. This server will allow for the web-based administration of the access software along with providing a temperature controlled, power conditioned and backed up storage solution. Utilizing an Internet connection, a site manager will have the ability to control and maintain the access control system in real time. Our hosted solution greatly reduces costly server and software maintenance in the long run as well as proving product support 24/7. All provided pricing is based on a monthly recurring 3-year contract but is billed quarterly for your convenience.

Fully Managed Service

- California Gate provides a fully managed access control solution for a fee (see table)
- Adding/removing key fobs, making schedule changes, generating custom reports, and so much more, we will take care of it
- A simple work order or phone call gets the job done. Our trained staff will make instant changes to your access control system
- No more software platforms to manage, no more logins to manage and no more headaches
- At a reasonable monthly cost there is no simpler way to have a fully remotely accessible access control system you never have to worry about
